

Business Partner 2016 Trophy

Following the 'quality of customer - supplier relationships' survey conducted by PFA Filière Automobile et Mobilités (PFA Automotive Industry and Mobilities), Fondex was awarded the Business Partner trophy in the SME category at the last Paris Motor Show - Mondial de l'Automobile (Paris, 2016).

Growing and honing our production capacity

FONDEX now uses AutoForm-StampingAdviserplus 3D simulation software.

This software significantly increases opportunities and capacity for designing complex deep drawn components and reduces research and manufacturing times. It allows simulations to be made based on part geometry with the addition of tooling possibilities, as well as process assessment using complete geometry that incorporates tooling. It also allows for crucial feedback on deep drawing specifications: rupture risk, thinning risk, wrinkling, changes to shape, savings on materials, etc. Better control of process, tooling and part design simulations results in improved responsiveness, quality and productivity due to more efficient production and optimised, secure operating in terms of the company's deep drawing capacities.

AIDA press

The latest generation AIDA Direct Servo Former press was acquired in 2014 and is being used increasingly skilfully by operators. Its productivity has been significantly boosted thanks to the use of the 3D AutoForm-StampingAdviserplus software.

International expansion consolidated

Europe

Development continues in Germany, a leading market and cornerstone of the company's international development strategy. The German office is moving into larger, more modern, and better equipped premises in order to provide improved quality of service for all customers.

Americas

FONDEX is reasserting its presence in Mexico with a new international volunteer intern (Volontaire International en Entreprise, VIE), Arthur Montagne, who has already spent six months in Mexico. He will

be responsible for sourcing opportunities, prospective clients and partners.

Excellence in quality

FONDEX boasts a high level of proficiency and experience in component inspection operations (size and cleanliness). We are equipped with three-dimensional testing machines and a cleaning and particle testing system. FONDEX is progressively adopting a lean manufacturing approach.

Development boosted by a high-profile client

An order completed for an international client led to the company integrating innovative technology, forming a partnership with a manufacturer in the Arve Valley and extending production and storage capacities. Initial results and data for this high-profile project will be released in 2017.
